V.S.R GOVERNMENT DEGREE P.G COLLEGE
MOVVA, KRISHNA DISTRICT, ANDHRA PRADESH, INDIA.

DEPARTMENT OF CHEMISTRY

Certificate

This is to certify that the dissertation work entitled "WATER CONSERVATION METHOD IN MOVVA MANDAL, KRISHNA DISTRICT" submitted by KAKI PUJA Tlin partial fulfillment for the award of B.Sc. Degree Krishna University, Machilipatnam, Krishna, A.P. It is a record of *bonafied* work carried out by her under my guidance and supervision. Her work is found to be satisfactory.

DECLARATION

I KAKI PUJA (2129223052005) declare that the Community Service project work entitled "**WATER CONSERVATION METHOD IN MOVVA MANDAL**" is an original work done by me under the supervision of Smt.K.R.MANJULAIN the Department of Chemistry, V.S.R Government Degree & P.G College during the year of 2021-2022. The work is original and has not been submitted in parts or in full, for the award of any other degree.

ACKNOWLEDGEMENTS

I am thankful to God for giving an opportunity and strength to fulfill our job. We wish to express our heartfelt, deep sense of gratitude, and sincere regards to our Project supervisor Smt.K.R.MANJULA, Lecturer in Chemistry, Department of Chemistry, for suggesting the problem, valuable guidance and constructive criticism throughout the course of this investigation. I convey my heartfelt thanks to Dr. S. Madhavi garu Principal of V.S.R Government Degree P.G. College, Movva for giving permission and encouragement towards for the completion of novel work. We take this opportunity to express our deepest sense of gratitude to all the Faculty members of V.S.R Government Degree &P.G.College, Movva.

We thank all my classmates for their constant support valuable help during our work and also very grateful to our friends who helped us. Finally, we take this opportunity to thank one and all that directly or indirectly helped us in completing this task.

INTRODUCTION:-

Water is the most important natural resource for all the life forms on earth. There are many researches that show by 2025, many countries along with India may face the scarcity of water. Many regions in our country are facing issues on "water stress" which according to a Swedish expert represents that the water availability falls below 1000 cubic meters per person per day. The socioeconomic development in India has played a vital role in decreasing water resource.

The modernization of agriculture, rising population and growing industrialization, water demand has been pushed up rapidly and many of our rivers have become toxic with pollutants and toxic chemicals from industries.

In the past years, many efforts have been made up to collect water by building dams, reservoirs and desalinate water since there is a declining availability, reuse of water and prevention of water pollution.

-: CSP SURVEY DETAILS :-

To create awareness on water conservation steps it is imperative of understand the level of awareness that people of the area have on water conservation. Hence, with the help of my project supervisor, I have developed, a questionnaire on water utilization and water conservation under standing in the rural and urban areas of Ayyanki town where I study in degree college. Data is collected during the month of June-2022 by going door to door with questionnaire. After collection of data, the level of awareness of general public on water conservation is understood and appropriate steps are devised and house to house awareness is conducted on water conservation and its importance. During the survey the details are conducted.

-: Need for conservation of water :-

Natural resources are limited and considering industrialization and global warming we should start focusing on preserving natural resources (or) need to find out optimum way to utilize these resources. Human beings are 60%, water is vital part of our functioning, which is true for the rest of life on this planet, plants, animals, and the environment all need water to survive and function. Humans use water growing, food, to sanitation, and recreation, water is an important and essential part of every ecosystem on the planet,

And when it's damaged (or) reduced, there are serious repercussions and consequences for human and animal life. Some people don't realize that drinking water is a valuable and limited resource, and that conservation makes a huge difference. When you conserve water, you ensure that there will be enough for people to use in times of drought, conservation helps make it so a given area has enough water to go around. Water scarcity is an enormous problem in some parts of the world.

While conserving water domestically isn't going to necessarily help abroad, conserving has access to food and clean water for drinking, cleaning, hygiene, and sanitation in daily life.

Water conservation steps explained to community:-

1. check your toilet for leaks:-

Put a few drops of food colouring in your toilet tank. If without flushing, the colouring begins to appear in the bowl, you have a leak that may be wasting more than 300 liters of water a day.

2. stop using your toilet as an ashtray (or) waste basket:-

Every cigarette butt (or) tissue you flush away also flushes away 15-20 liters of water.

3. Put a plastic bottle in your toilet tank:-

Put an inch (or) two of sand (or) pebbles in the bottom of a one liter bottle with two weights inside. Fill the rest of the bottle with water and put it in your toilet tank, safely away from the operating mechanism. In an average home, the bottle may save five gallons (or) more of water every day without harming the efficiency of the toilet. If your tank is big enough, you may even be able to put in two bottles.

4. Take shorter showers:-

A typical shower uses 20-30 liters of water. Limit your bath to the time it takes to soap up, wash down and rinse off. Do not keep open the tap while taking bath throughout.

5. Partially filled tubs:-

A partially filled tub uses less water than all but the shortest showers.

6. Turn off the water while brushing your teeth:-

Before brushing, wet your brush and fill a glass for rinsing your mouth.

7. Turn off the water while shaving:-

Fill the bottom of the sink with a few inches of warm water in which to rinse your razor.

8, check faucets and pipes for leaks:-

Even a small drip can waste 50(or) more liters of water a day.

9, use your automatic dish washer for full loads only:-

Running your dish washer, less often saves water and money. If not using dish washer, use mug to pour water on cleaned vessels instead of cleaning directly under water.

10, use your automatic washing machine only for full loads only:-

Your automatic washer uses 200 liters of water per cycle.

11, Don't left the faucet run while you clean vegetables:-
Rinse your vegetables instead in a bowl/(or) sink full of clean water.

12, keep a bottle of drinking water in the refrigerator:-

This is puts a stop to the waste-ful practice of running tap water to cool it for drinking. mix cold and normal water for drinking which is good for health and saves power and conserves water.

13, If you wash dishes by hand, don't leave the water running for rinsing:-

If you have two sinks, fill one with rise water. If you have only one sink, first gather all your washed dishes in a dish rack, then rise them quickly with a spray device (or) a pan of water.

14, check faucets and pipes for leaks:-

leaks waste water 24 hours a day, seven days a week. An inexpensive washer is usually enough to stop them.

15, water your plants/lawn only when it needs it:-

watering on a regular schedule doesn't allow for cool spells (or) rain fall which reduce the need for watering step on some grass. If it springs back up when you move your foot, it doesn't need water.

16, DEEP - SOAK your lawn:-

when you do water your lawn, water it long enough for water to seep down to the roots where it is needed. A light sprinkling that sits on the surface will simply evaporates and be wasted.

17, water during the cool parts of the day:-

early morning is better than dusk since it helps prevent the growth of fungus.

18, plant drought - resistant tree and plants:-

many beautiful trees and plants thrive without irrigation.

19, put a layer of mulch around trees and plants:-

mulch slow the evaporation of moisture.

20, use a broom to clean drive ways, side walks and steps:-

using a hose wastes hundreds and hundreds of gallons of water.

21, Don't run the hose while washing your two wheeler/ car:-

Soap down your two wheeler/car from a pail of soapy water. use a hose only to rinse it all off.

22, Tell children not to play with the hose and sprinklers:-

children love to play under a hose (or) sprinklers a hot day. unfortunately this practice is extremely wasteful of precious water and should be discouraged.

23, check for leaks in pipes, hoses, faucets and couplings:-

leaks outside the house are easier to ignore since they don't mess up the floor (or) keep you awake at night. However, they can be even more wasteful than inside water leaks especially when they occur on your main water line.

Title of the Project

***"Awareness on Water Conservation and Water Pollution in
General Population of Rural and Urban Areas of ~~Movva~~ Region"***

Questionnaire for the Project

1. What type of water system do you have :
a) Own Tap with overhead tank b) underground water well/bore) c) ☒ Community Tap
2. What type of water do you use for drinking a) Mineral water b) ☒ Tap water c) Ground Water
3. Colour and odour of your drinking water : ☒ No
4. How do you evaluate the quality of your drinking water a) very good b) ☒ satisfactory c) dissatisfied
5. Do you drink water from outside : a) At hotels b) Other places c) ☒ No
6. What kind of sewage system do you have
a) In house pit b) Drainage system c) ☒ polluted water is driven into nature i.e. ground etc
7. How do you wash up/take bath
a) By running water under tap b) ☒ Use bucket and Mug c) Shower/Sauna
8. While brushing your teeth : a) Do you let water run b) Use glass of water or mug c) ☒ It depends
9. What kind of toilet do you use : a) Flush b) ☒ Bucket/ Mug c) ODF
10. How much water do you use for a day : a) 10 L b) 15L c) 20L d) ☒ More
11. Do you experience water shortages a) No b) ☒ Rarely c) Almost every year d) It is constant problem
12. Do you have water conservation methods : a) Pits b) Community action c) ☒ None
13. Can you name any water borne diseases :
14. Does the water you use is a) Fluoride water b) Hard water c) ☒ None
15. How often do you clean water storage tanks per year a) once b) 2-3 times c) ☒ 4 times d) >6 times
16. What do you think is main reason for water pollution a) Industries b) ☒ Human Activity c) Animals/Nature
17. Are you interested to learn Water conservation methods and about Water pollution: ☒ Yes/No

***"Awareness on Water Conservation and Water Pollution in
General Population of Rural and Urban Areas of ~~MOVVA~~ 'OWVA'"***

Questionnaire for the Project

1. What type of water system do you have :

a) Own Tap with overhead tank b) underground water well/bore) ☒ c) Community Tap

2. What type of water do you use for drinking a) Mineral water ☒ b) Tap water c) Ground Water

3. Colour and odour of your drinking water : **ND**

4. How do you evaluate the quality of your drinking water a) very good ☒ b) satisfactory c) dissatisfied

5. Do you drink water from outside : a) At hotels b) Other places ☒ c) No

6. What kind of sewage system do you have

a) In house pit b) Drainage system ☒ c) polluted water is driven into nature i.e. ground etc

7. How do you wash up/take bath

a) By running water under tap ☒ b) Use bucket and Mug c) Shower/Sauna

8. While brushing your teeth : a) Do you let water run b) Use glass of water or mug ☒ c) It depends

9. What kind of toilet do you use : a) ☒ Flush b) Bucket/ Mug c) ODF

10. How much water do you use for a day : a) 10 L b) 15L c) 20L ☒ d) More

11. Do you experience water shortages a) No ☒ b) Rarely c) Almost every year d) It is constant problem

12. Do you have water conservation methods : a) Pits b) Community action ☒ c) None

13. Can you name any water borne diseases :

14. Does the water you use is a) Fluoride water b) Hard water ☒ c) None

15. How often do you clean water storage tanks per year a) once b) 2-3 times ☒ c) 4 times d) >6 times

16. What do you think is main reason for water pollution a) Industries ☒ b) Human Activity c) Animals/Nature

17. Are you interested to learn Water conservation methods and about Water pollution: ☒ Yes/No

Title of the Project

***"Awareness on Water Conservation and Water Pollution in
General Population of Rural and Urban Areas of Kayamkudi Village***

Questionnaire for the Project

1. What type of water system do you have :
a) Own Tap with overhead tank b) underground water well/bore ☒ c) Community Tap
2. What type of water do you use for drinking a) Mineral water ☒ b) Tap water c) Ground Water
3. Colour and odour of your drinking water : ☒ No
4. How do you evaluate the quality of your drinking water a) very good ☒ b) satisfactory c) dissatisfied
5. Do you drink water from outside : a) At hotels b) Other places ☒ c) No
6. What kind of sewage system do you have
a) In house pit b) Drainage system ☒ c) Polluted water is driven into nature i.e. ground etc
7. How do you wash up/take bath
a) By running water under tap ☒ b) Use bucket and Mug c) Shower/Sauna
8. While brushing your teeth a) Do you let water run b) Use glass of water or mug ☒ c) It depends
9. What kind of toilet do you use : a) Flush ☒ b) Bucket/ Mug c) ODF
10. How much water do you use for a day a) 10 L b) 15L c) 20L ☒ d) More
11. Do you experience water shortages a) No ☒ b) Rarely c) Almost every year d) It is constant problem
12. Do you have water conservation methods : a) Pits b) Community action ☒ c) None
13. Can you name any water borne diseases :
14. Does the water you use is a) Fluoride water b) Hard water ☒ c) None
15. How often do you clean water storage tanks per year a) once b) 2-3 times ☒ c) 4 times d) >6 times
16. What do you think is main reason for water pollution a) Industries ☒ b) Human Activity c) Animals/Nature
17. Are you interested to learn Water conservation methods and about Water pollution: ☒ Yes/No

-: Results and discussion of survey :- (8)

1. Regarding the type of water system half of the respondents have water tap with over head tank where as remaining 30% have underground water bore well connected to overhead tank remaining 20% use community of the water tap.
2. Almost 90% of the people agreed that they are using mineral/RO water and are satisfied that the drinking water they use is colourless and is without odour and is of satisfactory (or) very good in condition and all of them agreed that they drink water at hotels and rarely take the water in bottles from home.
3. Regarding the sewage system 70% of houses have in-house pit and drainage system where as 30% of households do not have such a system and polluted water is given into the open roads ground.
4. Regarding the usage of water by people it is concluded that people use (a) bucket and mug for washing and (b) do not run the water while brushing the teeth and (c) the toilet used in bucket mug system. All the three methods used by families are efficient in water conservation methods.
5. Regarding the amount of water used for day personally all people agreed at more than 20L of

⑨

water is used for cooking, drinking, watering and other purpose per head in a family and they experience a constant water problem and 20% said that they do not experience water shortages. most of them do not have water harvesting pits and there is also no community action regarding water conservation methods.

6. All the respondents agreed that they donot have any idea of water borne diseases. Hence it is concluded that they are ignorant of water borne diseases and they clean the water tanks only once/twice a year and most of them concluded that the main reason for water pollution is industries and for got the human activity is the main reason for water pollution and all of them do not have any idea of internal water conservation methods that can be adopted with in their family.

-: Conclusion :-

public water conservation compains raise water awareness in all levels of society about the importance of saving water, to cope with its scarcity and ensure sustainability. The aim is to change citizen attitudes and behaviour to improve water use efficiency. This is done through education and awareness compaigns on the socioeconomic and environmental benefits of water

community inhabitants and students were awareness
inhabitants and students were apprised of depleting ground
water levels and encouraged to conserve water. They
were also sensitized to encourage their friends and
family to take proper measures, like installing roof-top
rainwater harvesting systems in buildings. Conserve
water and stop using plastic.

Hence community service project created awareness
on water conservation among students and community
in general and further skills.

I thank my project supervisor, ~~Dr.~~
K.R manjula ^{for her guidance.} and support through out the project
and Thank my family members and all participants
who responded positively and helped in completing this
project.
